

QUALITY POLICY

Our mission is:

- **Maintaining our key position on the European metals processing market through systematically searching for new business partners and areas of commerce, including the aviation industry.**
- **Continuously fulfilling the individual expectations of our Customers, at the same time providing to them full satisfaction from our world-class quality products.**
- **Maintaining competent personnel, modern management techniques, innovative technologies, flexibility and full service throughout the entire life time of our products.**

Basing on Our Customers' satisfaction from the quality of our products and services, and on satisfying co-operation resting on affiliative business relations with suppliers in terms of meeting quality targets, we have adopted the following strategic and operating goals for our organization:

- **Establishing and maintaining a Quality Management System conforming to the requirements of EN 9100:2009 Aviation and space Requirements based on ISO 9001 as a permanent element of the continued mastery and development of the organization;**
- **Developing our organization by raising the professional qualifications of our personnel and their awareness of system and quality-related requirements;**
- **Perfecting relations and business contacts with our Customers, to fully meet their present and potential individual requirements;**
- **Increasing competitiveness by offering top-quality products, as confirmed by results of monitoring and measurement procedures;**
- **Systematically engaging the entire personnel of our organization into creating products at full utilization of their competences and experience.**

Meeting the above goals should guarantee maintaining our products at the highest technological, qualitative and business level, to satisfy the expectations of our Customers and ensure systematic development and improvement for our organization.

The Management of Metal Team has set the above goals in complete awareness of the full engagement of its entire personnel in reaching them, and is cognizant of its own duties in the area of perfecting and developing the QMS.
